

Brittany Garrett

ABOUT

My software applications look great inside and out! I design, code, and implement interactive applications while focusing on the fluid functionality of the user's experience. I bring a unique perspective through my experience in Public Health, Human Resources, Cosmetology, Digital Graphic Designing and Advertising. Leveraging this diverse background allows me to thrive while partnering with cross functional teams, providing distinctive vision, and approaching projects with a creative mindset. "I have no special talents, I am only passionately curious" - Albert Einstein

EDUCATION

Nashville Software School
Full Stack Software Development 2022

University of Illinois at Urbana Champaign
Bachelor of Science in Community Health 2010

SKILLS

JavaScript • HTML/CSS • React.js • Python • Django • SQL

WORK EXPERIENCE

Full Stack Software Development Apprentice - present

Nashville Software School | NSS

- Wireframe/mockup projects from initial designs to complete applications
- Create/implement modern, attractive digital assets for stylized applications including customized layouts, buttons, banners and additional imagery
- Create structured databases/APIs, write clean code, and design entire web applications for fluid full stack (frontend/backend) connectivity and communication
- Work collaboratively with teammates from diverse backgrounds and/or independently with a strong, balanced product/user focus
- Solid drive to learn, digest, apply, and master coding language practices for a seamless approach to streamline application completion

Digital Content Creator - 2019 to 2021

Visuals by BG | Freelance

- Created social media marketing posts and advertisements for various companies
- Promoted content on social media and monitored engagement
- Prepared, edited and proofread content drafts used for various digital platforms
- Developed marketing content for digital advertising platforms
- Conducted research used in SEO guidelines to optimize content
- Identified customers needs and recommended new strategies
- Coordinated with marketing and design teams to develop marketing content

Project Coordinator - 2014 to 2017

Columbia College of Chicago Conaway Achievement Project

- Assisted team with planning and execution of various projects
- Developed project timelines and ensured project goals are met
- Used spreadsheets to track project information
- Coordinated the planning of awareness events to serve underrepresented demographics
- Partnered with various community stakeholders and organizations in assisting low income, first time college students and disabled students throughout their academic career

Human Resources Admin Specialist- 2012 to 2014

University of Minnesota College of Pharmacy

- Coordinated, tracked and developed documentation for HR processes
- Collaborated with the HR team/manager through the hiring process life cycle to set and manage interview details & processes
- Handled all financial documentation including invoices, purchase orders, employee reimbursements & reconciliation of purchasing card transactions
- Formulated and maintained employee recording system

PROJECTS

2 of 2

TRENDAGO

Packing for unique travel destinations can be overwhelming, especially when you've never been there before. With TRENDAGO, you can search for current trends by keywords that match the user to pre-assembled fashion suggestions. Keywords include region names, climate terms, and/or clothing or accessory types. Users can also upload their own suggested trends according to their region and/or regions they have visited. This project was presented as my Front End Capstone.

Tech stack:

Giffygram

Being able to share fun and expressive gifs has grown to be a popular habit! Giffygram was created as a fun gif sharing web application that lets users post their favorite gifs, save their favorite gifs from other users and privately direct message other users. Giffygram was a group project that I was encouraged to take lead on by the evening cohort instructor. Even though it's a basic design, this project bridged our class introduction to using APIs, work together to properly use GitHub projects and work individually to bring a collective goal to fruition. I built several components for Giffygram including the direct message form, the direct message mailbox, the filtering components for the main feed's posts to filter by year, user name and/or favorites and more.
